Novel nucleic acids and such as central nervous

polypeptides, useful for system injuries -

treating disorders

Claim 1; SEQ ID NO 1658; 10078pp; English.

WPI; 2001-442253/47. P-PSDB; AAM40299.

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activinjoinhibin activity, chemotactic/chemokinetic activity, hamostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        567 erSerThrIleProCysThrAlaHisSerPheGlnPro 579
                                                                                                                                                                                                                                                                                                                                                                           The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           chemokinetic; thrombolytic; drug screening; arthritis; inflammation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human polynucleotide SEQ ID NO 5230.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAI61241 standard; cDNA; 3438
                                                                                                                                                                            Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/Inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel nucleic acids and polypeptides, useful for treating disorders such as central nervous system injuries \cdot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 2001-442253/47.

Isolated nucleic acid molecule encoding a human secreted protein used in preventing, treating or ameliorating a medical condition ı S

Claim 1; Page 372; 428pp; English.

The invention relates to the isolation of genes AAA58990-A59039 encoding CC 50 human secreted proteins AAB27560-B27609. The genes can be used to CC generate fusion proteins by linking to the gene for the human CC immunoglobulin G FC portion (SEQIDI) for increasing the stability of CC conditions, e.g. by protein or gene that human protein only: The genes and CC conditions, e.g. by protein or gene therapy. The genes are isolated CC conditions, e.g. by protein or gene therapy. The genes are isolated CC conditions, e.g. by protein or gene therapy. The genes are isolated CC control of the diagnosis, treatment and prevention of: (a) cancer, e.g. breast CC control of the diagnosis, treatment and prevention of: (a) cancer, e.g. breast CC control of the diagnosis, treatment and prevention of: (a) cancer, e.g. breast CC control of the diagnosis, treatment and prevention of: (a) cancer, e.g. bone CC control of the diagnosis, treatment and prevention of: (a) cancer, e.g. bone CC control of the diagnosis, treatment and prevention of: (a) cancer, e.g. bone CC control of the diagnosis, treatment and tract, liver, lung, or urogenital; CC control of the diagnosis, autoimmune thyroiditis, diabetes mellitus, Crohn's CC disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and CC epilepsy, and (f) infectious diseases e.g. cerebral anoxia and CC and parasitic infectious diseases such as viral, bacterial, fungal

                         The present sequence is one of 3351 sequences in a library of human CC polynucleotides. The library is used to detect differentially expressed CC genes correlated with a cancerous state of a mammalian call and can cC detect colon, prostate, breast and lung cancer. The library can be used to produce probes for detection of mRNA and to produce additional copies CC of the polynucleotides. The probes can be used for chromosome mapping of CC the polynucleotide and for detection of transcription levels. Ribozymes CC or antisense oligonucleotides can be generated. The polynucleotides and CC their gene products are used as genetic or biochemical markers (e.g. in CC blood or tissues) that will detect the earliest changes along the CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC preventive interventions. The polynucleotides, polypeptides and CC preventive interventions. The polynucleotides, polypeptides and CC creat the cancers and proliferative disorders such as neoplasia, CC dysplasia and hyperplasia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1048
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           868

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to human single exon nucleic acid probes (SENP). The present sequence is one such probe. The SENPs are derived from human Hela cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Probe; microarray; human;

                                                                                                                                                                                                                                                       The present invention relates to novel single exon nucleic acid probes. The present sequence is one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic aetiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the human treatment of the human treatme
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           195 IleLysLeuHisHisGlnAsnGlnGlnGlnIle

The present invention relates to human single exon nucleic acid probes (SENP). The present sequence is one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.

The present sequence is one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the prob hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic actiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative breast disease and
                                                                                                                                                                                                                                                  153

Human polyhomeotic 1 (hph1) oncogene

```
Criticology of this polynucleotide comprises a novel human oncogene termed complynomeotic 1 (hphl) that is implicated in neoplastic disorders. Criticology for a 1004-amino acid polypeptide (see ANM37856). The gene critical polypeptide consisting of at least 22 contiguous amino acids; (2) an hphl fusion protein; (3) antibodies which specifically bind to a composition of hphl protein; (3) antibodies which specifically bind to a composition of hphl protein; (5) a homologously recombinant cell having care and (c) a splice donor site, where the TUI is located cupstream to a coding sequence of an hphl gene, where the exogenous cregulatory sequence; (b) an exogenous cregulatory sequence; (b) an exogenous cregulatory sequence; (b) an exogenous cregulatory sequence of an hphl gene, where the exogenous cregulatory sequence of an hphl gene, where the exogenous cregulatory sequence of an hphl gene, where the exogenous cregulatory sequence of an hphl gene with the coding sequence of the hphl gene, where the exogenous creaming neoplastic; (7) a method of identifying neoplastic tissue of a being neoplastic; (7) a method to aid in the diagnosis or mRNA, creaming the expression of the hphl gene indicates neoplasia creaming the products can also be used to inhibit hphl expression to choose the expression to hopping the expression to the products can also be used to inhibit hphl expression to conspirate the expression can have retodermal dysplasia, congenital alveolar dysplasia, epithelial dysplasia of the cervix, fibrous dysplasia of bone, or mammary dysplasia or consumers. Similarly, in tumours where hphl expression is not these disorders, decreasing hphl expression can help to suppress considering hphl down-regulation can suppress metastases. Can hisense polynuclectides can also be used to induce differentiation of conferentiation and test compounds which affect this process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 7; Page 25-27; 39pp; English.

                           gene identifies the subject as having neoplastic tissue. The hph1 oncogene functions to suppress neoplasia and dysplastic or hyperplastic cell growth as well as to induce cellular differentiation. The cDNA, protein and vectors can be used as diagnostic and therapeutic tools for proliferative and developmental disorders and to identify a pl3 region of a human chromosome 12. They can be used for the detection, diagnosis or prognosis of neoplasia or for detecting a genetic predisposition to neoplasia. They can also be used to treat tumours.
                                                                                                                                                                        The present sequence encodes a novel human tumour suppressor gene termed polyhomeotic 1 (hphl). The hphl gene maps to human chromosome 12pl3, a region which is frequently lost in non-small cell lung cancer and breast cancer. A method of identifying neoplastic tissue of a human comprises comparing the expression of a hphl gene in a tissue of being neoplastic with the expression of a hphl gene in a tissue of the human which is normal. Under-expression of the hphl
                                                                                                                                                                                                                                                                                                                                                 Isolated human poly:homeotic 1 oncogene - used to develop products for diagnosis and therapy of proliferative and developmental disorders, e.g. neoplasia, dysplasia or hyperplasia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Tumour suppressor gene; identification; neoplast

                                                                                                                                                             A ARZ32000 and ARZ32001 encode, and ARY49501 and ARY49502 represent, human metalloprotease thrombospondin (METH) proteins METH1 and METH2 CC respectively. METH1 and METH2 have been found to be potent inhibitors of crespectively. METH1 and METH2 have been found to be potent inhibitors of concer and other disorders related to angiogenesis including abnormal cc wound healing, inflammation, rheumatoid arthritis, psoriasis, condimetrial bleeding disorders, diabetic retinopathy, some forms of condimetrial bleeding disorders, diabetic retinopathy, some forms of conditions degeneration, haemangiomas, and arterial-venous malformations. They may be useful in treating deficiencies or disorders of the immune cc system, by activating or inhibiting the proliferation, differentiation, or or mobilisation (chemotaxis) of immune cells. The etiology of these cimmune deficiencies or disorders may be genetic, somatic, such as concer or some autoimmune disorders, acquired (e.g. by chemotherapy or toxins), or infectious. They can also be used to treat inflammatory conditions, both chronic and acute conditions. The products can also be used for detection and diagnosis. AAZ32002 to AAZ32080, and AAY49503 to incention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; METH1; METH2; anti-anglogenic; metalloprotease thrombospondin; cancer; diagnosis; hyperproliferative disorder; autoimmune disease; anglogenesis inhibitor; abnormal wound healing; inflammation; rheumatoid arthritis; psoriasis; endometrial bleeding disorder; diabetic retinopathy; macula degeneration; haemangioma; detection;
